# Administrate

# Release Highlights from 2017

## Background

2017 was an excellent year for Administrate! From expanding our offices, releasing lots of fantastic updates to our product, and adding to our integrations offering, a lot was going on! To make sure you've not missed anything that we've been doing, here are some highlights of everything Administrate achieved in 2017!

## Releases

- We added a new Course Template screen and a Session Schedules tab, which allows you to plan out all the sessions for each of your courses.

- There's now a 'duplicate' option on both Course Templates and Event creation, which will copy your fields over to a new draft event, allowing you to edit just the changing information.

- Training Tokens were introduced, which allows customers to pre-purchase tokens which can later be exchanged for training.

- Our Learning Management System now supports ten different languages - Hindi, Spanish, Japanese, Arabic, Russian, Chinese, German, Portuguese, French, and English.

- We launched our new Support Centre.

- Our Xero integration was updated to include Payments and Credit Notes.

- Lead Liaison launched an integration with Administrate to allow data collected in Lead Liaison to be pulled automatically into our CRM.

- We launched an integration with CloudShare, leading provider of premium IT environments in the cloud, meaning customers can create virtual training labs in CloudShare and still manage them from within Administrate.

- New features were added to the SurveyMonkey Integration.

- Our Salesforce integration is now available on the Salesforce AppExchange.

- Learner Assessments are now available in the Student Portal.

- Our Events list is now improved and a lot speedier to use!

## The Team

- We grew our international presence by adding a US office in spring 2017. The office is in Bozeman, Montana. We've got some great links with Bozeman, plus it has some magnificent scenery, much like Scotland, and a useful timezone for the East and West Coasts, so it was the perfect location for us.

- Our team in Lebanon grew throughout 2017, so much so that we had to move to a bigger office!

- All this means we're in a solid place to provide a great and global service to our customers.

## LITE Conference

- 2017 saw Administrate host our third annual LITE Conference. This year we moved the venue to CodeBase, home of Administrate's Edinburgh office and the largest technology incubator in the UK.

- We also unveiled our Developer Portal for our new GraphQL API at LITE, as well as introducing our new Professional Services team.
